1. Eight automatic meteorological stations have been functioning during the winter of 1947-48 in Yugoslavia. These stations, which have been brought from the Soviet zone of Germany, are installed on high mountain peaks.
2. A station consists of two 22-meter masts and one eight-meter mast connected with four independent mechanical apparatuses for measuring temperature, pressure, and force and direction of wind. Energy is supplied by batteries which have to be re-charged once a year.
3. Data obtained by this apparatus are first recorded electrically, then transformed into meteorological code signs and transmitted by V/T.
